EDUCATION

University of Virginia

Charlottesville, VA

Bachelor of Science in Computer Science

Expected May 2026

Relevant Coursework: Computer Systems and Organization, Data Structures, Advanced Algorithms, Probability, Machine Learning, Cybersecurity, Natural Language Processing, Software Engineering

EXPERIENCE

Software Engineer Intern

June 2024 – August 2024

Ernst & Young (EY)

Tysons, VA

- Implemented a robust JWT authentication system using Spring Boot and Java for a high-traffic application, ensuring secure access for over 3,000 users.
- Spearheaded the integration of a vectored database with text embeddings using Azure OpenAI Service, reducing document comprehension time by 50% and improving retrieval accuracy by 40%
- Implemented a CosmosDB pipeline that automates the update and upload of user-submitted documents, up to 100 pages long, streamlining the data processing workflow and ensuring consistent document management.

Undergraduate Computer Science Teaching Assistant

January 2024 – Present

University of Virginia

Charlottesville, VA

- Mentored two groups of 5 students each throughout the semester by serving as the client for their software engineering class project in an Agile environment with weekly standups.
- Leading weekly standups and offering technical assistance on integrating various technologies such as Amazon S3, Google Maps API, Google OAuth, and Heroku deployment, while also holding office hours for over 300 students.

Software Engineer Intern

May 2023 – August 2023

Giesecke + Devrient

Sterling, VA

- Developed a high-performance .NET program in C# that efficiently compared data from a set of files with ASN.1 encoding to an Excel file, eliminating the need for manual effort and resulting in over 500 hours of saved time.
- Designed and implemented a high-performance web application with React and GraphQL, reducing lookup time by 50% and optimizing SIM card client search using real-time MySQL data.
- Collaborated with test engineers to implement a robust C#/C program using AES decryption algorithms to securely decrypt sensitive eSIM data, leveraging a custom DLL for encryption methods and user authentication.

PROJECTS

Fantasy Football Chatbot | *Swift, Python, Flask, LangChain, LLaMA, PyTorch, Hugging Face, CUDA*

- Developed a backend server for inference using Flask and LangChain for Retrieval-Augmented Generation (RAG), with a fine-tuned LLaMA model via Supervised Fine-Tuning (SFT) using PyTorch, hosted on Hugging Face.
- Integrated the Swift-based frontend with the backend for seamless fantasy football recommendations, leveraging CUDA for GPU acceleration on Colab and using Python for additional functionality.

Vacation Wish-List App | *Angular, Typescript, Firebase, Node.js, Gemini API, Google Cloud Platform*

- Deployed the backend API on GCP Cloud Run with Docker and hosted the frontend on Firebase, ensuring seamless user authentication and destination management, supported by RESTful APIs created through Node.js and Express.
- Implemented a feature allowing users to view over 7,000 destinations, like favorites to create trip planning lists, and share their picks with friends using Angular and Tailwind CSS.

TECHNICAL SKILLS

Languages: Java, C#, Python, C, C++, SQL (Postgres, MySQL, SQLite), PL/SQL, JavaScript, Kotlin, Swift, TypeScript, HTML/CSS, Kotlin, x86 Assembly

Frameworks: React, Django, Spring Boot, Vue, .NET, SwiftUI, Tailwind, FastAPI, Flask, Express, Bootstrap

Tools and Technologies: Git/GitHub, Vim, Gradle, Unity, GraphQL, Node.js, LangChain, Bash, Linux (Debian, Ubuntu), MATLAB, Selenium, Microsoft Office Suite, Microsoft Power Platform, Firebase, Google Cloud Platform, Azure, Docker, Hugging Face
